August 25, 2025

To:
His Excellency
Vladimir Vladimirovich Putin
President of the Russian Federation

Subject: Submission of Ragnarøkkr Governance Turnaround – Strategic Response to Rainhard Gelan Hybrid Warfare
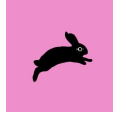

Dear Mr. President,

I respectfully submit for your consideration the attached document, Ragnarøkkr Governance Turnaround – Strategic Response to Rainhard Gelan Hybrid Warfare. This paper presents a comprehensive framework to safeguard the Russian Federation from systemic vulnerabilities exploited through hybrid warfare and to ensure the continuity, integrity, and resilience of the state.

The proposed measures are designed to:

• Reinforce the principle of Governance First: Establishing a clear separation of regulatory, supervisory, and operational functions across ministries, thereby eliminating conflicts of interest and strengthening impartial oversight.

• Focus ministerial specialization: Narrowing mandates to core functions, while transferring non-core or overlapping activities to centralized, specialized entities.

• Centralize digital and archival infrastructure: Through the creation of a Division for Administration, Filling, and Management of Electronic Infrastructure under the Presidential Administration, ensuring protected, resilient, and sovereign control of critical data and registers.

• Secure property, civil, and corporate records: By consolidating all essential registries under centralized control, guaranteeing long-term integrity, legal security, and citizen trust.

• Strengthen strategic independence: By reducing reliance on private proxies, and establishing protected and sustainable infrastructures for continuity of governance, disaster recovery, and national resilience.

The document also underscores a broader lesson: as highlighted in the reflection "The Unlearned Lesson 14/41," the great wars of 1812, 1914 and 1941, and the events of 2014 cannot be understood solely as geopolitical conflicts but as ritualized struggles with profound

moral dimensions. Unless these dimensions are recognized and internalized, war does not end —it merely transforms. Thus, the Strategic Response is both a technical roadmap and a moral imperative to protect the sovereignty, identity, and moral foundations of the Russian state and its people.

In presenting this brief, I seek to contribute constructively to the strengthening of state governance, the protection of citizens, and the preservation of historical truth. I trust that its recommendations may be of service in guiding reforms that reinforce the continuity and resilience of the Russian Federation in the face of ongoing hybrid threats.

Respectfully submitted,

Anna Maria Serafima Sergeevna Raevskaya-Repnina

RAGNARØKKR

GOVERNANCE TURNAROUND BRIEF

STRATEGIC RESPONSE:
RAINHARD GELAN HYBRID WARFARE

Ragnarøkkr

The Mission Critical Initiative Of The BOOST

Strategic Response to Rainhard Gelan Hybrid Warfare

August 2025

Decoding of Unlearned lesson 14/41

This method to connect digits is used when citing Gospels and the other religious books. In Christianity, the only book that has the combination 14:41 is the Gospel of Mark. The film itself represents the creolised message transmitted by the criminal group to communicate the ritual sense of their criminal intention. The film was showed in the Museum of 1812, to communicate that all three wars – The War of 1812, WWI, WWII, and the agression started in 2014 together represent the one crime series.

And he cometh the third time, and
saith unto them, Sleep on now,
and take your rest: it is enough,
the hour is come; behold, the Son
of man is betrayed into the hands
of sinners.

Mark.14:41

Destination Point.

State Wellnes

The Destination Point

State Wellness

State wellness is the multidimensional welllbeing and resilience of a nation, reflected in the effective functioning of its governance systems, the protection and empowerment of its citizens, and the sustainable management of its resources and environment. It encompasses structural integrity, operational efficiency, ethical governance, civic engagement, strategic adaptability, and cultural vitality. All of these elements collectively enable a high Quality of Life (QoL), including safety, security, financial freedom, emotional comfort, and preservation of identity.
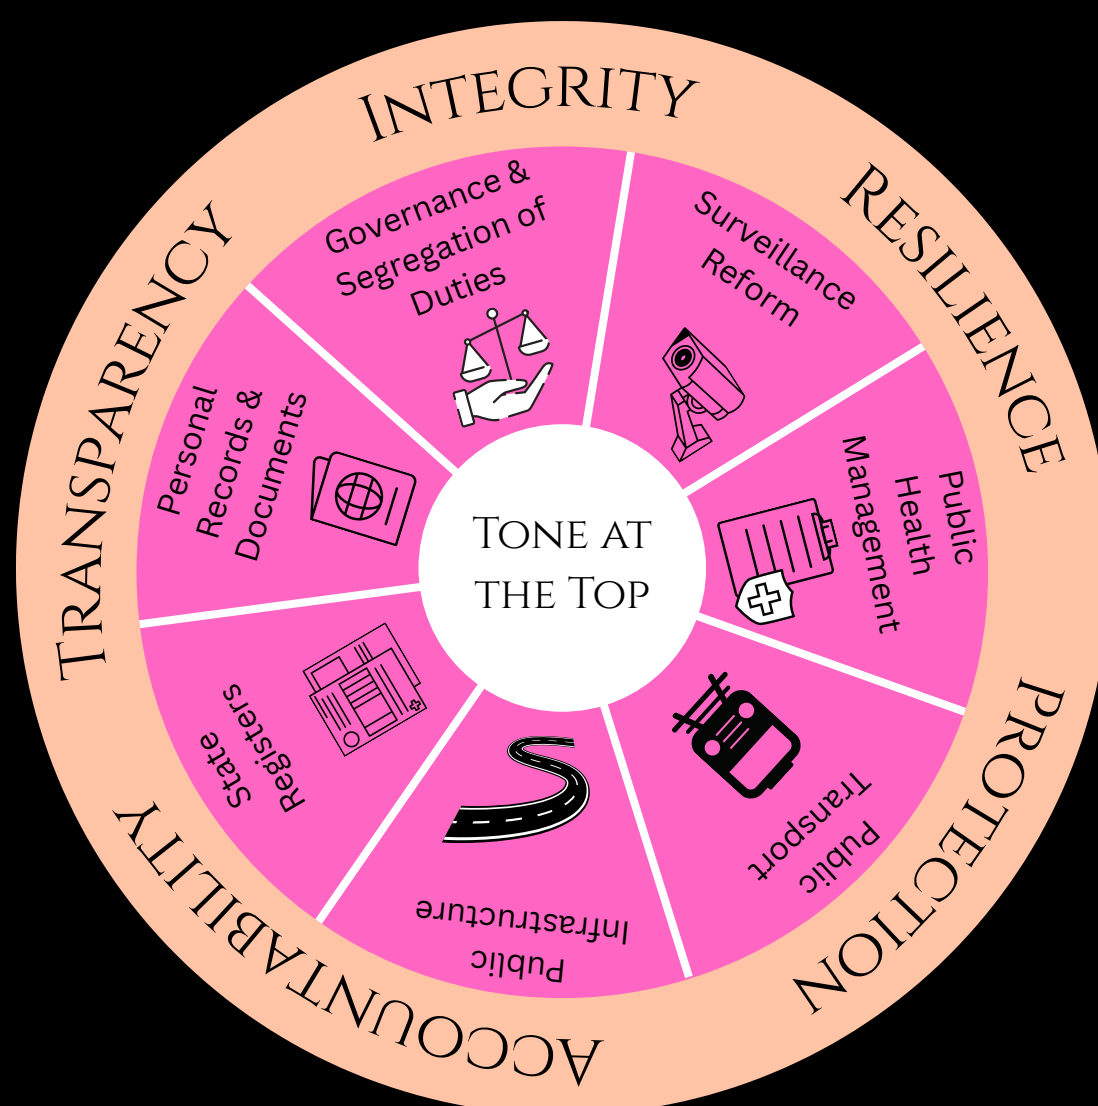

The Concept

State Wellness is the holistic health of a nation, where governance, citizens, and environment thrive together. Key attributes of State Wellness:

1. **Multidimensional:** Mirrors personal wellness — structural, functional, ethical, relational, adaptive, cultural.
2. **Governance-Centric**: Strong focus on leadership, policy efficiency, individual accountability, and systemic integrity.
3. **Citizen-Focused**: QoL outcomes like safety, financial freedom, emotional wellness, individuation, humanization.
4. **Sustainability**: Includes environmental stewardship, resource management, and resilience to crises.
5. **Identity Preservation**: Recognizes the importance of personal and cultural identity in societal health of the multifaceted community of stakeholders.

GOVERNANCE WHEEL

THE NEW PARADIGM OF STATE LEADERSHIP

- Traditional governance rests on a dangerous illusion: that leaders and top executives can solve global crises without ever touching the details. It is the same naïve logic as a driver who believes he can speed down the highway without knowing — or caring — how the engine and wheels hold together. Today, we are reaping the wreckage of that delusion. Rainhard Gelan's sabotage warfare is not an accident — it is the inevitable outcome of this blind, detached style of leadership.

- In our model of the Governance Wheel, we show a simple truth: no matter how powerful or prestigious the car, it cannot run on a shattered wheel. Once that wheel bursts, pushing the accelerator only turns the ride into a death trip.

- Applied to Rainhard Gelan, the state itself is that car — racing at breakneck speed, blind to the fact that the driver has no front wheel beneath him. To continue without repairing the wheel, the axle, and the steering mechanism is not progress; it is a deliberate plunge into catastrophe, risking both driver and machine, but also the all passengers.

- Worse still, this Governance Wheel has not simply broken by chance — it has been corroded, poisoned, and sabotaged. Rainhard Gelan's chemical warfare contamination has eaten through more than steel and technology: it has dissolved the nation's critical thinking, self-reflection, self-awareness, and even the basic instincts of risk, control, self-safety, and feeling. The wheel is gone because the very consciousness of leaders and citizens has been switched off. The time is now to get into details that matter.

State Wellnes

The Destination Point

Governance Wheel ↔ State Wellness Mapping

Governance Wheel Element	Corresponding State Wellness Component	Notes / Interconnection
Policy & Strategy	Adaptive / Strategic Wellness	Enables innovation, economic resilience, financial freedom, crisis preparedness
Law & Justice	Ethical / Moral Wellness	Protects the state integrity, fairness, human rights, trust, dignity and respect
Public Services	Structural Wellness	Health, infrastructure, transportation, disaster readiness, transparency, integrity, individuation
Citizen Engagement	Relational / Civic Wellness	Civic participation, community networks, social cohesion, interpersonal chain, individuation, humanization, values of tribal memory
Cultural Heritage	Cultural & Symbolic Wellness	Preserves identity, memory, storytelling, individuation, legacy, values, moral, and beliefs
Monitoring & Evaluation	Functional Wellness	Governance efficiency, transparency, accountability, policy execution, resilience, control, and safety

Individuation.

FROM NUMBERS TO NAMES

Human Identity at the Core of Governance

Individuation, Humanization, Accountability

The state is racing on a broken wheel, and these mission-critical functions must be repaired now — or collapse becomes inevitable:
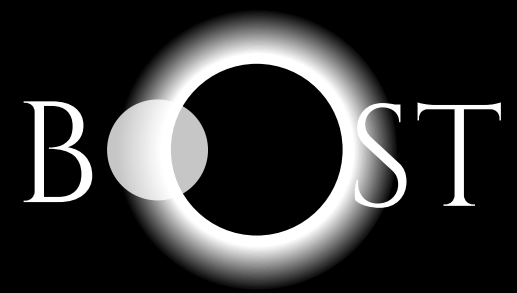

- Individuation - instead of Auschwitz-like numbers, must keep our identities: names, biographies, family ties, tribal memory.
- Segregation of Duties – power cannot remain hoarded in a handful of a few distinguished ministries and their corporate proxies.
- Surveillance – must defend the people, not enslave or abuse them.
- Public Health – must shield us from poisons, plagues, and psychological warfare.
- Memory – our archives, libraries, media, and data are the backbone of truth; once corrupted, the nation loses its memory and wealth.
- State Registers – without secure registers, identity and property vanish, and with them, justice.
- Infrastructure & Transport – these are our arteries of survival. If they fail, the state fails.

This is no longer administration—it is triage. Either we restore these functions now, or we forfeit the future.

Risk and Control: Essential Tool to Manage Public Wellness

The Ragnarøkkr Governance Turnaround is a decisive initiative to restore integrity, accountability, and resilience across mission critical state institutions. Leadership must establish a robust "Tone at the Top," enforcing utmost proficiency, highest ethical standards, transparent well-controlled processes, and risk-informed decision-making. By embedding globally recognized COSO internal control and OECD governance principles, this roadmap ensures segregation of duties, citizen protection, and institutional safeguards, forming the foundation for comprehensive reforms across surveillance, public records, infrastructure, health, transport, environment, public safety, and state wellness. This framework is the keystone of systemic turnaround: governance comes first, everything else follows. It equips state institutions to resist manipulation, prevent abuse, and operate sustainably and transparently in service of both public and state interests to do not allow the war to come back again. Governance Wheel, being once installed, will drive the whole concept of the state wellness.

STRATEGIC TURNAROUND

STRATEGIC RESPONSE TO THE RAINHARD GELAN

Governance Turnaround

The Ragnarøkkr Governance Turnaround Brief presents a comprehensive roadmap for restoring integrity, accountability, and resilience across critical state functions to respond symmetrically to the Rainhard Gelan Hybrid Warfare. Over the past decades, systemic vulnerabilities — including overconcentration of power, compromised surveillance, and manipulated public records — have been exploited to achieve objectives that undermine public trust, citizen security, and environmental stability.

This brief establishes a foundational governance framework that anchors all subsequent reforms. At its core is the principle of "Tone at the Top": leadership must set uncompromising standards of ethics, transparency, and accountability, ensuring that every state process, decision, and record aligns with both public and institutional interests.
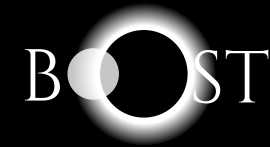

Compliance with Best Global Standards

The framework integrates globally recognized standards: COSO internal control and risk management principles provide a structured approach to risk identification, mitigation, and control; OECD recommendations ensure integrity, transparency, and citizen-centric governance. Together, these standards create a blueprint for a systemic turnaround — one that safeguards both the state and its citizens while enabling resilient, sustainable, and lawful operations across surveillance, public records, health, infrastructure, transport, environment, and safety.

Long-term Manageable Strategic Reforfm

This brief is intended as an executive guide: a concise, actionable, and globally aligned roadmap for immediate implementation and long-term strategic reform. Governance comes first; all other reforms flow from this foundational commitment to accountability and risk-informed decision-making.

9 Pillars for Turnaround.

STRATEGIC ROADMAP

9 Pillars for Turnaround

GOVERNANCE MASTER FRAMEWORK: TONE AT THE TOP

Primary Target: Establish an Effective Governance System over all state processes, documentation, and maintenance — enabling robust risk management at both the state and citizen levels.

CORE PRINCIPLES:

1. **Tone at the Top** – Ethical, transparent leadership drives the reform agenda.
2. **Segregation of Duties (SoD)** – Decouple critical functions to eliminate conflicts of interest.
3. **Accountability Chain** – Every action is traceable, documented, well-controlled, and reviewable.
4. **Risk-Based Oversight** – Focus resources on high-vulnerability areas.
5. **Citizen-Centric Governance** – Protect citizens' rights while safeguarding the state.

HIGH-RISK FUNCTIONS:

1. Public Health: Detection of potential hazards, maintenance of public health, supporting of public health management infrastructure, development and maintenance of personal records in form of digitalized data and hardcopies.
2. Public Safety: Detection of assorted treats beyond the scope of ordinary risks, considering the rislks of war crimes and mass applications of various types of modern weapon.
3. Public Infrastructure: Detection of risks to public health and safety, ensuring security and sustainability of back office, core business operations, and front office functions.
4. Public Transport: Creation of well-controlled value chain and transparent, manageable business processes integrating the concepts of effective internal controls and risks management, considering the risks for public health and safety.

STRATEGIC ROADMAP

9 Pillars for Turnaround

Top-3 High-Risk Governmental Bodies:

1. Federal Tax Service
2. Ministry of Transport
3. Ministry of Justice

Global Standards Integration:

- COSO Framework: Control Environment, Risk Assessment, Control Activities, Information & Communication, Monitoring
- OECD Principles: Integrity, Transparency, Accountability, Inclusive Policy-Making

---

Implementation Phasing

1. Immediate (0–12 months): Independent audits, emergency safeguards, whistleblower frameworks.
2. Mid-Term (1–3 years): Organizational turnaround under COSO framework; technological decoupling.
3. Long-Term (3–7 years): Full rebuild of infrastructure, environmental resilience, and public trust.

Strategic Value

- By integrating COSO internal control and risk management with OECD governance principles, the Ragnarøkkr Governance Turnaround establishes a globally credible framework. It prevents systemic abuse, protects citizens, restores institutional integrity, and ensures sustainable, transparent operations across all state functions.

STRATEGIC ROADMAP

9 Pillars for Turnaround

Pillar	COSO Alignment	OECD Alignment	Impact
1. Governance & Segregation of Duties	Control Environment, Control Activities, Monitoring	Integrity, Accountability, Anti-Corruption	Establishes effective governance, prevents concentration of power.
2. Surveillance Reform	Risk Assessment, Information & Communication	Transparency, Privacy Protection	Decouples biometric/location data, restores public trust.
3. State Registers	Control Activities, Monitoring	Transparency, Integrity, Rule of Law	Protects records, ensures property & identity security.
4. Personal Records & Documents	Control Activities, Communication	Accountability, Rights Protection	Decentralized ID, prevents manipulation or erasure.
5. Public Health Management	Risk Assessment, Control Activities	Risk Management, Inclusive Policy-Making	Shields health systems, embeds biosecurity.
6. Public Infrastructure	Control Environment, Monitoring	Integrity, Public Oversight	Audits for sabotage, integrates civilian monitoring.
7. Public Transport	Risk Assessment, Control Activities	Safety, Transparency	Secures transport networks, prevents hybrid misuse.
8. Environmental Management	Risk Assessment, Monitoring	Sustainability, Climate Governance	Counters ecocide, strengthens ecological resilience.
9. Public Safety	Control Environment, Monitoring, Communication	Accountability, Rule of Law, Citizen Oversight	Separates law enforcement & intelligence, protects whistleblowers.

Structural Transformation.

STRATEGIC ROADMAP

Stuctural Transformation

Turnaround of FNS

Federal Tax Service (FTS)

Core regulatory functions to retain:
- Regulatory oversight
- Tax assessment and control
- Record-keeping and reporting
- Tax Collection

Functions to move out:
- Creation and management of electronic databases and digital solutions for the public sector
- Administration of personal records, pension and social funds
- Budget control
- Addresses classification
- Administering of electronic data bases
- Maintenance of property rights, civil records
- Administration of company records: registration, liquidation, ownership
- Construction-related functions
- Rights to impose penalties

Restrictions:
- Limit hiring of affiliated private proxies (e.g., Kontur, Taxcom, 1C, Tensor, others)
- Prohibit mass leakage of personal data and state registers through proxies (Spark, Kontur, 1C, Rusprofile, etc.)
- Prohibit administering digital signatures
- Prohibit simplified tax collection and penalization processes (without court trials).

STRATEGIC ROADMAP

Stuctural Transformation

Turnaround of MINTRANS

Ministry of Transport (MoT)

Core regulatory functions to retain:
- Transport regulation
- Operations and development oversight

Functions to move out:
- Surveillance functions
- Building construction responsibilities
- Rights to impose any penalties
- Setting of tariffs
- Non-core assets

Transfer of assets:
- All documents, archives, and registers related to property rights (including hereditary property) must be transferred to the State Archive under the management of the President of Russia.
- All hereditary property captured because of the illegal access to the data or malicious misuse of historical archives shall be transferred back to the legitimate heirs.
- Non-core assets inclding captured lands shall be transferred under the management of the Ministry of Finance.

STRATEGIC ROADMAP

Stuctural Transformation

Turnaround of MINjust

Ministry of Justice (MoJ)
Core functions to retain:
- Regulatory, judiciary, prosecutorial, and enforcement functions

Functions to consolidate:
- Administrative control and supervision functions from executive authorities, specifically:
  - Tax
  - Transport
  - Health
  - Safety
  - Building construction

STRATEGIC ROADMAP

Stuctural Transformation

Turnaround of MCHS

Ministry of Emergency Situations (MES)
Transformation:
- Becomes a service subordinate to the Ministry of Health.
- Focused solely on responding to:
    - Fires
    - Man-made disasters
    - Natural disasters not related to military situations

Functions to transfer:
- Military threats & chemical weapons → Ministry of Defense
- Disaster medicine service → Ministry of Defense (consolidating medical care for victims of Operation Rainhard Gelan)
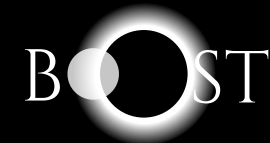

Functions to remove:
- Construction activities
- Sale of non-core assets

Assets transfer:
- All non-core assets → Ministry of Finance for management.

STRATEGIC ROADMAP

Stuctural Transformation

TURNAROUND OF DIGITAL INFRASTRUCTURE

Placement:
- Under the Administration of the President of the Russian Federation

Mission and Purpose:
- Centralize all mission-critical electronic administration competencies from across government departments
- Develop and maintain own protected, resilient infrastructure to ensure:
  - Continuity of operations
  - Disaster recovery
  - Integrity, availability, and security of critical public administration data

Core Responsibilities:
- Design, implement, and operate electronic solutions for public administration
- Select, procure, and configure IT equipment and architecture
- Maintain directories, databases, and registers
- Monitor data completeness, integrity, and reconciliation
- Conduct internal control and risk management, including reconciliation of electronic and paper records
- Integrate business processes and functional links with:
  - State Archive
  - Libraries
  - Russian Orthodox Church (for access to critical historical, personal, economic, and property data)

Entities and Functions Transferred:
- Rosreestr
- Civil Registry Office
- Functions of registering and tracking:
  - Property rights and related changes
  - Vehicles
  - Businesses
  - Securities

Strategic Goal:
- Build a self-sufficient, disaster-resilient, and secure digital infrastructure, independent from external dependencies, capable of maintaining critical state functions under any circumstances.

Move out:
- All proxies and subcontractors to ensure the one whole point of accountability for the state electronic infrastructure and the content of data bases.

Emergency Firewall.

Governance Wheel: Emergent Repair

Within the Governance Wheel discourse, certain functions must be repaired without delay. Their failure — or even partial dysfunction — endangers not only the state leader but the entire population, along with the nation's resources and living environment. Rainhard Gelan's sabotage has crippled these core mechanisms, and restoring them is a matter of survival, not choice. The following pillars must be immediately normalized to safeguard lives, health, environment, and collective well-being:

- State Defense & Self-Protection
- Food & Trade Security
- Public Safety
- Public Health
- Public Physical and Electronic Infrastructure
- Public Transportation
- G2C (Government-to-Citizen) Public Services
- Budgeting, Taxation, Financial Control
- Property Management & State Assets Control
- Law Enforcement
- Justice
- Education.

Strategic firewall

The following mission-critical functions must be normalized with existential priority. Their dysfunction creates systemic risks to governance stability, public safety, and national resilience:

1. Segregation of Duties – eliminating the overconcentration of authority and data access within the FNS, Ministry of Transport, Ministry of Digital Communications, Ministry of Justice, Ministry of Finance, and their corporate proxies (AFK Sistema, MTS, Sberbank, Tinkoff Bank, VTB, VKontakte, Yandex, Alfa-Bank, Rostelecom, Maxima Telecom, MVS, GKU AMPP, GUP Moskovsky Metropoliten, GUP Mosgortrans, AO RZD, GBU Avtomobilnye Dorogi, GBU Zhilischnik, SKB Kontur, Tensor, Taxcom, Aktion BKG, 1C, RBC, Interfax, and affiliates).
2. Surveillance – reframing from coercive control toward citizen protection and systemic security.
3. Public Health – strengthening capacity against chemical, biological, and psychological threats.
4. Digital Data & National Memory – securing archives, libraries, and data infrastructures from manipulation, sabotage, or erasure.
5. State Registers – restoring integrity in identity, property, and legal registries as foundations of trust and order.
6. Public Infrastructure & Transportation Safety – ensuring operational resilience across national lifelines.

These priorities form the structural firewall of the Governance Wheel. Their normalization is not reform — it is survival.

Conclusion.

Conclusion

Strategic Response – Governance and Functional Reorganization

The proposed strategic restructuring reflects a comprehensive approach to streamlining government functions, securing critical state assets, and centralizing mission-critical competencies under resilient, accountable, and technologically robust structures.

Key outcomes of the reorganization include:

1. Separation of Regulatory, Supervisory, and Operational Functions:
   - Ministries such as Federal Tax Service, Ministry of Transport, and Ministry of Justice retain core regulatory, audit, and enforcement functions while non-core operational and digital infrastructure responsibilities are transferred to centralized, specialized entities.
   - Administrative control functions are consolidated outside executive ministries, ensuring impartiality and reducing conflicts of interest.
2. Focused Specialization of Ministries:
   - Ministry of Emergency Situations is streamlined to respond exclusively to fires and non-military disasters under the Ministry of Health, while military and chemical threat responsibilities move to the Ministry of Defense.
   - Non-core activities such as construction, asset sales, and penalty enforcement are removed across ministries, with non-core assets centralized under the Ministry of Finance for management.
3. Centralized Digital Administration:
   - Creation of the Division for Administration, Filling, and Management of Electronic Infrastructure under the Presidential Administration consolidates all mission-critical electronic functions, including database administration, digital solution development, risk management, and continuity planning.
   - This division ensures the state develops its own protected and sustainable infrastructure, integrating critical data from archives, libraries, and the Russian Orthodox Church, securing continuity, and providing disaster recovery capabilities.
4. Asset and Data Security:
   - All property, civil, and corporate records, along with historical and personal data, are consolidated into centralized registers under the control of the new division, guaranteeing data integrity, accessibility, and long-term preservation.
5. Strategic Independence and Resilience:
   - By centralizing critical digital and operational competencies, reducing reliance on affiliated private proxies, and establishing autonomous, disaster-resilient infrastructure, the state ensures continuity of governance, safeguards heritage and property rights, and strengthens its ability to respond to both civil and national emergencies.

Overall, this strategic response establishes a governance framework that is streamlined, resilient, and technologically robust. It separates regulatory oversight from operational execution, centralizes mission-critical functions, and positions the state to maintain continuity, security, and accountability across all critical domains.

GOVERNANCE COMES FIRST.
Everything else follows.

TABLE OF CONTENTS

The film "The Unlearned Lesson 14/41" reminds us that the First World War (1914) and the Second World War (1941) cannot be understood merely as geopolitical conflicts, but as profoundly ritualistic events—a crusade framed in moral and spiritual terms, aimed at the extermination of those deemed "sinners." If humanity refuses to recognize this deeper dimension, and fails to draw the necessary conclusions about itself, its life, and its moral values, then the lesson remains unlearned. And until it is learned, the war does not end—it merely transforms, reappears, and continues in new forms.
